III.—SYSTEMATIC.

The classification of Sharpe's "Hand-list" is here followed as regards orders and families. The genera are arranged alphabetically in the families. This method is a change from the old system, as so many alterations in nomenclature and generic status have been introduced since the publication of the "Hand-list."

Full references are given only in the case of new genera and species. In other cases the numeral in heavy Clarendon refers to the List of Titles, where the full reference will be found. The figures in smaller Clarendon refer to the volume number of the full reference.

* This paper was printed in 1887, but owing to a personal quarrel between the author and the late Dr. Moreno was never published or distributed except possibly in limited numbers. There is a copy received in 1916 in the Geological Library of the Natural History Museum and two of the three new genera are to be found in the Berlin Nomenclator now in the course of publication. It is therefore known to Paleontologists though never formally published previously to 1936.

SECOND SUPPLEMENTARY LIST OF ABBREVIATIONS, WITH
TITLES, OF PERIODICAL PUBLICATIONS, CONTAINING
PAPERS DEALING WITH MATTERS OF ZOOLOGICAL
IMPORTANCE.

Since the issue of the last volume of the Zoological Record in November, 1936, some new periodicals have commenced publication, some have been revived and attention is called to a few older ones accidentally omitted from the complete List published in vol. lxxi of the Record in 1935.

It is therefore thought advisable to publish a list of these. As previously, the numbers following the titles correspond to those in the new edition of the "World List" issued in 1933. Where such a number is not given the periodical is a new venture. The letter in heavy type denotes the library where the periodical can be consulted.

The following are the library symbols used in this list :—

- N.** General Library of the Natural History Museum.
- Nz.** Zoological Library of the Natural History Museum.
